Education

University of British Columbia — Sep 2024 - Apr 2028

Bachelor of Science

- Currently a general science student intending to major in computer science.
- Relevant courses: a foundational programming course in Lisp, another on models of computation, and two proof-based differential and integral calculus courses.
- My GPA is 91%.

Projects

Course Catalog — Feb 2025 - Present

- Course planning and selection at my university is a harder-than-necessary process, so I am building ubcmatch.com as a better alternative
- Currently, you can only search courses; however, I plan to implement the ability to favourite courses, see courses friends are taking, and make course plans, among other things.
- So far, building the catalog has involved scraping current catalogues, and using Next.js, InstantDB, and Tailwind CSS.

Personal Blog — Feb 2025

- I've long wanted a fast, simple, and personal way to share what I'm up to, so I built ilia.is.
- I made the site using Next.js, InstantDB, and Tailwind CSS.
- I created an admin interface with log-in to upload images.

Photo Editor — Jan 2024

- It allows users to import and make basic adjustments to an image such as exposure, contrast, tint and temperature.
- I built the photo editor with Java. I made the GUI with the Swing library and built the editing functionality with a mix of my own solutions and built-in classes from the AWT Image package.
- I took on this project in high school to learn object oriented programming.

About Me

Languages

One of my biggest pleasures is language learning. Currently, I am fluent in English, Georgian and French as well as on the verge of being conversational in Japanese.

Hobbies

Photography has been my activity of choice for the past 6 years, but more recently I've been exploring drawing—I'm currently working through *Keys to Drawing* by Bert Dodson. I also like to keep active with basketball throughout the week.
